IMF improves their predictions for Mexican economy

The International Monetary Found (IMF) improve their predictions of increase for Mexico on this year in the frame of the gradual recovery of economic activity in Latin America.

2017 predictions for Mexican economy increase in 1.9 per cent, two tenths up from their last prediction in April that was set in 1.7 per cent, meanwhile the predictions for 2018 was 2.0 per cent.

Increase will be support by the strong economy activity that Mexico's registered, on the first trimester January to March of this year, appoints IMF in their updated of World Economic Outlook (WEO).

Document was revealed this month in Kuala Lumpur. For Latin America, the IMF said that the contraction that was registered the last year, when had a decrease of 1.0 per cent, and it will expect that in 2017 will be a gradual recovery, including Argentina and Brazil.

Said that, if their perspective of Brazil are good, the weakness on domestic demand and increase of political uncertainly will be reflected in this recovery.

Said that other Latin-American economies forecast decrease on predictions of their economy increase, with damage of Venezuela economy. For Latin American group, the IMF reduced a tenth they predictions of increase for this year and the next one with 1.0 and 1.9 respectively.

Mexico its more attractive for FDI than Brazil in 2017

Despite of Brazil offered reach investment higher than Mexico, foreign investor prefer Mexican bonds over that are offered by Brazil. The Foreign Direct Investment as part of sovereign bonds in both countries have been decreasing through the last two years, but the decrease has been fewer in Mexico and tendencies as part of Brazilian debt now its near of historical minimal in five years.

The investors still have been optimistic over the amount rate in Mexico and have been recovering, in their most, from political shock by election of Donal Trump. This have been occurred when in many terns have been more prudent to other actives of emerging market after biggest increase registered on the first half of the year.

Foreign investors started recently purchases of Mexican Government in CETES of short term and Mbond in long term, after reducing their tendencies through most of the part of second trimester, due to Mexican Bank.

The market of Mexico's bonds haven't experimete a significative liquid from part of the foreign investors after Trump's victory, which boosted increase of efficiency and caused a fall of 17% of Mexican peso.

A change at currency Mexican policies can also straighten the attractive of Mexican bonds after that Central Bank said that the last month in the cycle of higher probably finished and the next month will be a cut of amount.

The analyst also said their are in favor of rates in Mexico, reach of many uses with care to other emergent markets.

Mexico factory activity rises to over one-year high in June

Growth in Mexico's manufacturing sector rose to a more than one year-high in June, on stronger output, new orders and employment, a survey showed on this month. The Markit Mexico Manufacturing Purchasing Managers' Index rose to 52.3 in June from 51.2 in May when adjusted for seasonal swings, hitting its highest since May 2016. A reading above 50 signals expansion in the sector, while a reading below that points to contraction. "The latest PMI survey provides a positive signal for near-term growth momentum across the Mexican manufacturing sector" senior IHS Markit economist Tim Moore said in a statement.

Moore noted the rebound followed a sluggish period early this year where the PMI headline rate was close to its lowest reading in three years. Higher sales volumes pushed the rate of employment growth to a 14-month high, while input price inflation was down from a peak early this year after the peso sank to a record low.

But the peso has bounced back and business confidence has improved as U.S. President Donald Trump backed away from threats to impose tariffs on Mexican-made goods and move toward a renegotiation of the North American Free Trade Agreement (NAFTA). Mexico sends about 80 percent of its exports, which are mostly manufactured goods like cars and TV's, to the United States.

The PMI index is composed of five sub-indexes tracking changes in new orders, output, employment, suppliers' delivery times and stocks of raw materials.

Cosmovitral Botanical Garden

and around the world. In the midst of the garden is a bust in honor Eizi Matuda, an explorer and Japanese botanist for 28 years that was an Herbalist in the State of Mexico. This monumental work contains more than 6,000 species of plants discovered and classified by this distinguished scientist.

The Cosmovitral has the most important stained glass built in the 20th century, one

Housed in a former marketplace in Toluca, Mexico, the Cosmovitral Botanical Garden is filled with stained glass pieces that some say make the beauty of the flora within wither in comparison.

After the market closed down in the 1970s, the Cosmovitral was repurposed as a botanical garden and outfitted with a number of colossal works of stained glass art in 1980. The botanical garden itself has over 500 species of plants primarily native to Mexico, and there are a number of fountains and brings scattered throughout the landscape.

These organics surroundings the football-field-sized greenhouse. Comprising over 71 individual works, the windows display several themes relating to man and his understanding of the universe. The centerpiece of the collection is a huge central glass wall known as The Sun Man. When the sun shines through the windows, the building is awash in deep reds and warms blues, making the artful garden feel both organic and cosmic.

The Botanical Garden extends over an area of 5,000 m² of which 3,500 is occupied by about 400 species of plants, trees and shrubs from the State of Mexico

of the most relevant contributions to international contemporary art, and experts say the worlds largest stained glass!. Created by master Leopoldo Flores Valdez, this monumental work required the participation of a group of nearly 100 artisans for the production of lead, over 40 tons of blown glass, 28 different colors of glass and over 70 tons of metallic structure.

Thought its 71 windows, including the vitrolafon, The Cosmovitral addresses the relationship between man and the universe, the cycles of life and the dualities and antagonisms of the universe.

Annual inflation decreases to 6.28% in the first half on July

During the first half of July, consumer prices rose 0,24 percent, with annual inflation falling to 6.28 percent after 5 months of rising rates.

The National Institute of Statistics and Geography (INEGI) reported that the inflation is a result of the increase in tourist services and air transport due to the holiday season, as well as the increase in some agricultural products, which was partially counteracted by the decrease in energy. Thus, with the rate of 0,24 percent in the first half of July, annual inflation was placed at 6,28 percent, lower than the 6,33 percent in the second half of last June.

Despite this pause in its upward trend, general inflation at annual rate adds up to 13 per cent above 4.0 percent, which is the maximum inflation target for this year of 3,0 percent plus/minus one percentage point.

The Institute pointed out that in the first half of July 2016 the corresponding data shows a fortnightly inflation of 0,28 percent and an annual inflation of 2,72 percent.

It reported that products with rising prices in the first half of this month were tourist services, tomato, air transport, potatoes and other tubers, restaurants, bananas, beef, homes, beer and tomato.

Meanwhile, products with lower prices were domestic gas, sweet bread, cars, low octane gasoline, grape, skin cream. women's pants, bleachers, women's underwear and personal deodorants.

It pointed out that in the first half of July 2017 core inflation, which eliminates goods and services, the prices of which are more volatile, showed a rise of 0,19 bi-weekly percent and an annual rate of 4,92 percent, from 4,85 percent in the second half of June.

Reynosa announces wind power plant

The Danish company Vestas, a leader in wind energy, will install one of its plants in the municipality of Reynosa, in the state of Tamaulipas, an action that will generate new jobs and a substantial economic revenue for the entity said Governor Francisco Garcia Cabeza de Vaca.

He announced that the construction of the complex, which will be located in the west of Reynosa, will begin between August and December of this year.

Agreements were signed after the governor made a trip to Denmark, on July 11 and 12, to learn about the company's facilities, as well as its development center in the city of Aarhus and its production facilities in Ringkøbing.

"We have been impressed by Vestas' ability for innovation and productive strength. We are proud that the company will build its only production facility in the country in our state" said the governor.

During his visit, García Cabeza de Vaca explained to the managers of the transnational company the competitive advantages of Tamaulipas for the development of wind energy parks and also for the installation of a plant dedicated to the manufacture of the components of its generators, in this case, its last generation blades.

The V136 blades, currently the most advanced in the industry, will serve not only to meet local demand but also North America's. Angélica Ruiz Celis, the general manager of Vestas in the region, said that Tamaulipas's quality wind resources, infrastructure and attractive investment framework make the state a central point for this type of energy.
